

**Script:**

Through enormous modernization efforts, healthcare organizations are streamlining processes to improve patient care.

**Animation Notes:**

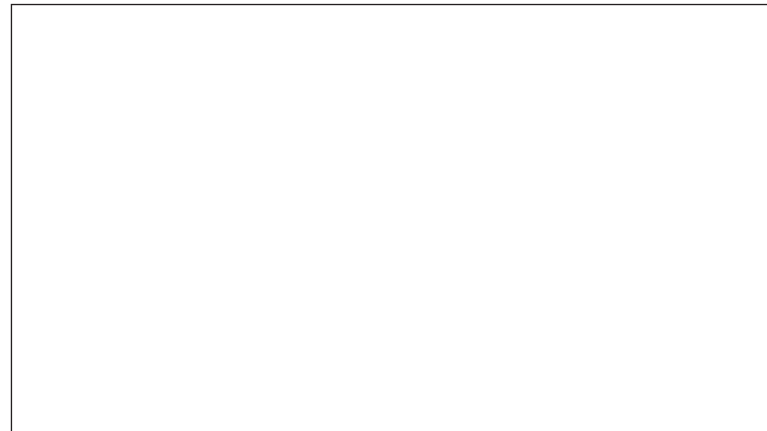

Show an older looking healthcare building with a cross on it made out of bricks

Then show that healthcare building, still with the cross, transformed into a new "modern" building with white pillars and lots of glass

1.4

**Notes for Video:** None

**Script:**

Many are using platform engineering to operate cloud-based technologies and build new digital experiences.

**Animation Notes:**

Pan down and show below the new healthcare building while still showing most of the building toward the top

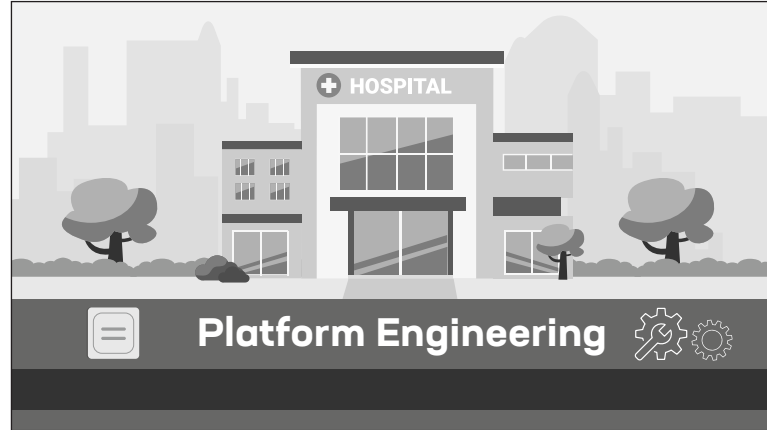

Below the building, bring in a large metal platform that has “Platform Engineering” written across it

The platform has gear and wrench icons on top of it

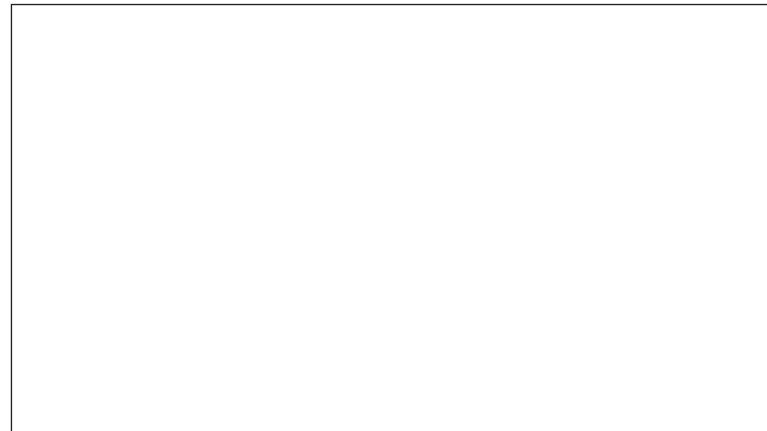

Bring in an electrical cord with a plug that goes into the platform

Then show the modern healthcare building lit up from the power

**Notes for Video:** None

**Script:**

Platform engineers can use F5 to optimize AWS environments with the security and reliability necessary for developing rich applications and services that improve patient experiences, secure sensitive data, and generate revenue.

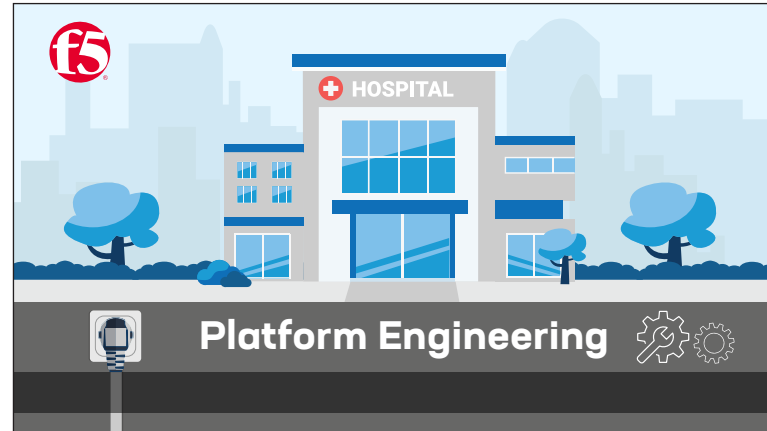

**Animation Notes:**

Bring in the F5 logo over to the upper left of the screen

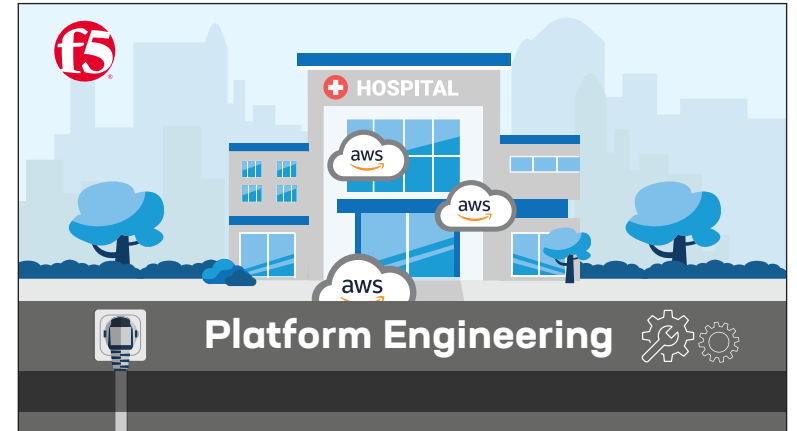

Show many AWS cloud logos coming up out of the platform and below the healthcare building:

Also, show all 5 icons show up one by one on the screen

Notes for Video: None

**Script:**

Platform engineering can improve patient care by operating the edge-to-cluster connectivity necessary for AI-driven healthcare services with F5 NGINX (pronounced 'Engine X')...

**Animation Notes:**

Wipe to a new screen and still have the "Platform Engineering" platform at the bottom

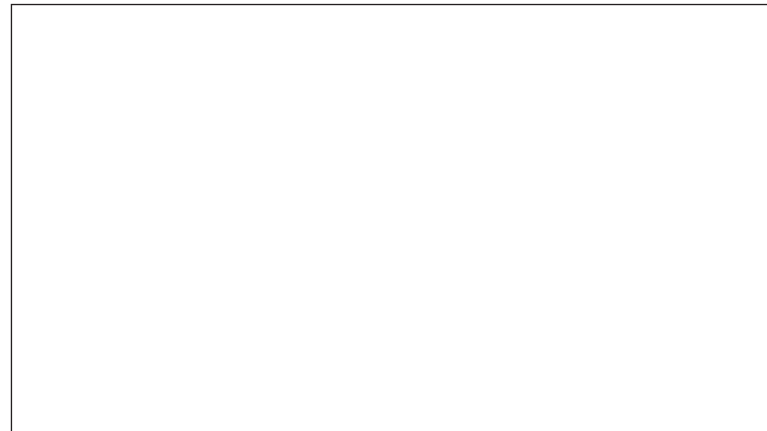

On the left side of the screen, write "Improve Care with AI"

Below the text, show the NGINX logo
